

Insert Strips for Cable Marker (KMK...), Terminal Strip Marker (KLM...) and Terminal Strip Label (UBE...)

1. Description

Nowadays, the demands made of marking with respect to durability and appearance are ever increasing. To meet these requirements, we now supply two new options made of a perforated plastic foil (see photo). They can be labeled using a conventional laser printer (DIN A 4 format), or a thermo transfer printer (for material off the roll). It is of course still possible to label them with the M-PEN or CMS plotter. The advantages are that the lettering is permanent and makes an excellent impression, it is resistant to solvents, simple to handle and saves time when you have a greater throughput.
